

ABSTRACT OF THE DISCLOSURE

A method of performing a beauty diagnostic method is disclosed. The method includes asking a subject personal questions on at least one topic including characteristics of at least one external body condition of the subject. Answers to the personal questions are received and, based on those answers, there is a selection of at least one customized set of testing material for determining quantitative information that would aid in recommending at least one beauty product to the subject. The method further involves informing the subject about the customized set of testing material. Also disclosed are systems and computer program products.
